Assignment #1
Project Overview Statement

Printed: 29.09.2026

Prepare a Project Overview Statement document for an IT-related project (the exact topic of the project is up to the group, as long as it is IT-related).

Project Overview Statement is the very first document in the project-implementation process. It contains a high level overview of the project, reasons behind it, its goals etc. This document usually contains:

1. **Project's business case** — what problem will this product solve, or what opportunity will it exploit?
2. **Project's goals** — what exactly do we want to achieve. The goals should be measurable and verifyable.
3. **Criteria for success** — a list of project's goals, which must be achieved for the project to be considered a success.

   Not all of the project's goals have to belong here. Sometimes the criteria for success may be less ambitious than the project goal.

   For example: *The goal of taking part in a course may be getting a very good grade, but a passing grade will also be a success*.
4. **Assumptions** — assumptions under which we will start the project.

   For example: *We'll start to work on a next gen console game with the assumption that we'll be able to get the devkits for this console*.
5. **Risks** — the main risks the project will have to face.
6. **Main tasks to be completed** — what you'll have to do to successfully complete the project.
